

Barnwood

Case study

Barnwood Ltd already used several web and app-based applications but wanted a product that would give them access to all the solutions they needed in one product.

Nathanael Challacombe, Group HSQE Manager:

“We particularly wanted a product that would provide analysis and a means to desk top audit effectively and efficiently.

We previously used software to help us with the following:

- HSQE Audits
- Near miss notifying
- Prestart induction
- Point of Work Risk Assessments
- Web based signing in

The Compliance Genie wraps all of these five different apps into one easy-to-use product.

We also wanted a system that would link to our internal intranet and with the API in development this will be a possibility.

The team at Be-Safe Technologies have engaged with us from concept and helped us to successfully on-board.

Having a friendly single point of contact has been great and the engaging collaborative approach suits Barnwood.

“The Compliance Genie is paving the way for Barnwood to digitalise our HSQE systems and providing greater visibility for site teams, management and support teams to monitor performance through the dashboards.”
Nathanael Challacombe

I also like that fact that we can share our ideas with the team at Be-Safe and **The Compliance Genie** is aimed to be tailored to how we work and not have to change our processes and digital forms to a prerequisite set of fields.

For example, using **The Compliance Genie** we quickly introduced a Waste Transfer Note system removing the need to order triplicate coloured log books. A simple digital form on **The Compliance Genie** speeds up the process and is accessible to our Plant and Transport department and the HSQE team.

Our ISO Auditors also liked the system as the digital records were straightforward to access and a data trail showed how we complied with legislation and ISO standards in our recent audit.
